                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               80
                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel inositol polyphosphate kinase (IPPK) polyphotides and polymucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polymucleotides of the invention are to produce transgenic plants with altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The

                                                                                                                                                                                                                                                                                                             20
         ö
in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polymucleotides of the invention are to produce transgenic plants with altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The present sequence is maize IPPK DNA
                                                                                                                                                                                                                                                                                                                             ATGCCCGACCTCCACCCGCCGGGGGCACCACCAGTCGCCGGTCACCGCGCCTCCGCCAGCAAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynuclectides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polynuclectides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The present sequence is maize IPPK DNA

Sequences of the invention are useful in medulating the phytic acid biosynthesis by decreasing phytate and/or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Bolynucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The

The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Polynucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The present sequence is P. argentatum IPPK DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     당당
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4 LeuHisProProGluHisGlnValAlaGlyHisArgAlaSerAlaSerLygLeuGlyPro

The invention relates to novel inositol polyphosphate kinase (IPPK) polypeptides and polynucleotides. Sequences of the invention are useful in modulating the phytic acid biosynthesis by decreasing phytate and/ or increasing non-phytate phosphorous to improve the nutritional value of animal feed, or to reduce the environmental impact of animal waste. Or polynucleotides of the invention are to produce transgenic plants with an altered phenotype. IPPK proteins are used to screen compounds that modulate their activity and raising anti-idiotypic antibodies. The
